

# STANDARD ACCESS CONTROL

## MULTIACCESS

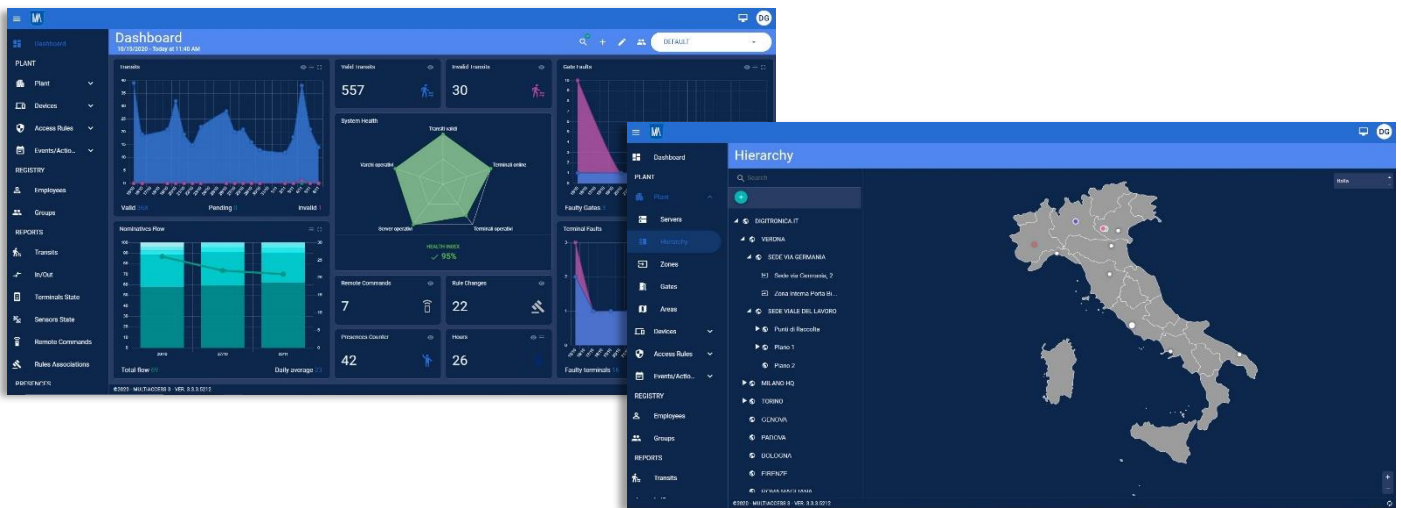

**MultiAccess** is a modular and customizable access control software, aimed at acquisition, validation and real-time monitoring of employee, contractor, visitor access, according to access rules and authorization policies, and designed to interact with all devices typically being used for control and corporate security: badge readers, biometric detectors, cameras and various types of sensors.

### Key Concepts

- Web interface from any device (e.g. PC and tablet).
- It allows access control in real time even in complex and distributed geographical deployments.
- Multi-company and multi-site architecture that also integrates third-party hardware at native protocol level.
- It allows to manage complex hardware and system architectures, checking the user's authorizations in real time.
- Synoptic engine to define multilevel and geographically distributed systems.
- Localization on a graphic map of the following elements: field devices, access authorizations, anomalies, transits, personal data, etc.
- Customizable dashboard for real-time monitoring of access control system status.

## Features & Benefits

- More security ensured by real-time operations even in geographically distributed systems.
- Guarantee of service continuity even with network connectivity problems.
- Compatibility with different types of devices.
- Management of anti-passback policies.
- Reduction of authorization management times through centralized control.
- Structured and hierarchical definition of access policies.
- Redundant and scalable modular architecture.
- Responsive design to allow the use even through smartphones and tablets through a web interface and without having to install, use and maintain specific apps.

## Digitronica.IT

### Identity Management

Centralized corporate repository of personal data

### Badge Production

Creation, encoding and production of badges

### Access Control

Standard and remote access control

### Visitor Management & Virtual Reception

Structured management of accreditation processes

### Centralized Supervision of Security Systems

Centralized supervision platform

### Video Surveillance

Video surveillance & video analysis solutions

### Centralized Supervision of Alarm Systems

Centralized supervision platform

### Customized Projects

Custom solutions developed by Digitronica.IT
